

DevOps

Are you curious about how social networks and positivity can change the way food, beverage and hospitality businesses attract new customers? Are you a fan of new technologies who enjoys growing and sharing knowledge? A foodie, lifestyle guru or somebody who loves to experience new places? To support our vibrant and growing Development team in Lisbon, we are seeking a passionate and forward-thinking Cloud/DevOps Engineer that will maintain and further improve our cloud-based infrastructure on AWS. You will drive continuous improvement of our CI/CD pipelines and health monitoring solutions, with high levels of security and compliance in mind.

About TWISPER

TWISPER is a social travel app to discover and share great restaurants, hotels and bars around the world. The app is 100% ad-free and only has real users and positive, personal recommendations. TWISPER's community includes friends, partners and influencers. With partners, TWISPER also organizes charity campaigns to help the world become a better place.

To have a positive impact on the hospitality and gastronomy industry, TWISPER recently launched TWISPER Business, a platform where businesses can get new guests through digital word of mouth. Unlike TripAdvisor and other unfair booking systems, TWISPER Business features no negative reviews, no commissions, no fake users and no ratings that negatively affect businesses everywhere.

The Job

We are looking for a Cloud/DevOps Engineer who will manage infrastructure projects and processes.

As an experienced DevOps engineer you will help our team establish DevOps practice. You will work closely with the technical lead (**Head of Development**) to identify and establish DevOps practices in the company.

You will establish configuration management, automate our infrastructure, implement continuous integration and help us build scalable, efficient cloud infrastructure.

Therefore, a commitment to collaborative problem solving and the creation of quality products is essential.

Main Responsibilities

- Build and maintain our AWS infrastructure
- Continuous Integration & Continuous Delivery development (Jenkins, GitLab)
- Develop Infrastructure as Code for our environments using (Terraform, Packer, Vault and Ansible.)
- Improve our monitoring & alerting tools development & configuration (Grafana, ELK, Zabbix and Graylog)

Pre-requisites

- Strong Linux system administration background;
- Strong Network and Security administration and concepts background.
- Understanding of Linux internals and concepts;
- Hands-on experience with containers & orchestration platforms;
- Fluency in English
- A passion for technology and the ability to learn new concepts quickly
- Critical thinker and problem-solving skills
- Team player
- Good time-management skills
- Great interpersonal and communication skills

Nice to have

- Experience with systems design for high-traffic and high-availability (load balancing, caching, database design, deployment etc.);
- Scripting languages knowledge. Experience with Python and/or BASH is a strong plus;
- Good SQL skills (e.g. MySQL, PostgreSQL);
- Experience with technologies like Apache, Nginx, HAProxy, Serverless
